

BH Woodturning is a wholesale manufacturer and distributor of stair parts and custom millwork accessories. Founded in 1958, BH Woodturning has grown consistently to meet and exceed the demands of local and international markets. We produce a diverse line of quality, trend setting products which also includes customizing and tailoring to meet customers' needs.

Within our 50,000 sq. foot facility, our reman and moulding departments are as extensive as our turning operation. This allows us to not only manufacture products for the stair industry but also for the door and window industries.

Located on the west coast of North America, we are strategically placed in the heart of coastal hemlock, our largest and most popular wood source. As an international port this also allows BH Woodturning to source and supply materials globally.

INTERIOR

INTERIOR

BH Woodturning manufactures and distributes complete lines of stair parts for residential and commercial markets. The stair parts are crafted to exact standards, from stocked hemlock, oak, maple and poplar, with availability in a variety of other species. Producing handrails and mouldings complements our line of stair components which includes treads and risers, spindles, balusters, newel and box posts, and a myriad of accessories. We are also fully equipped and dedicated to duplicating old or new designs or customizing products either by hand or machine to satisfy clients specifications. With such diversity in craftsmanship, BH Woodturning Ltd. has become a leader in the stair and millwork industry.

Exacting standards

Simple but elegant design

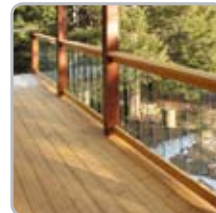

Steady & richly textured

EXTERIOR

EXTERIOR

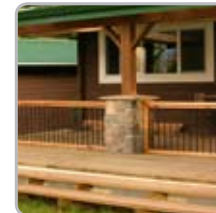

Western Red Cedar is sought the world over for its attractive appearance and natural resistance to decay; it is easy to work with and easy to finish. Wood is the world's only renewable building material and is not only recycled but regenerated as well. Homeowners, architects and designers have always preferred the warmth and character provided by cedar. BH Woodturning's exterior line also uses ACQ treated pine which is a slow growing, fine grained fibre making it less likely to warp, bow or twist. With its resistance to decay, it too is popular as an exterior wood and an excellent alternative to cedar.

Unique aroma

Cedar complements any architectural design - from turn-of-the-century to contemporary

Beauty enhancing

STAIRS

STAIRS

A curved or straight freestanding staircase is an enduring statement of style and elegance. BH Woodturning's crafted laminated stringers with solid hardwood treads sweeping from the upper level in a traditional or contemporary style creates a visual statement for any home. They're available with complete self supporting stringers, enabling full utilization of straight or curved stairway railings on all levels. From start to finish, BH Woodturning helps with design, style, construction and installation to build a staircase unique to the house for which it is crafted. For home owners and builders, it not only makes a visual statement but also a sound investment.

Unique to your home
